3 NOTES

- Grooves always face the framing. The smooth paper face is the finished side and stays smooth through the bend.
- Stand sheets vertically - grooves run the sheet height, so the sheet bends across its 48" width.
- Joints to flat drywall and between Easy Curve sheets are taped and finished like standard drywall.
- When ordering, give the finished radius (R) or diameter (D) and wall height. Confirm tight radii with GMG before ordering.
